ABSTRACT

This report consists of data tables summarizing test results statewide for students in grades 11 and 12 who took the New Jersey Minimum Basic Skills (MBS) test in March, 1987. The MBS assesses minimum skills in reading and mathematics. It is used as the graduation test for students who entered ninth grade prior to September 1985 and have not yet passed this test, and for students no longer enrolled who were denied a diploma in 1985 or 1986 because they did not meet the basic skills requirement. Results for each subject are compared to student performance in previous years. In addition, tables are included that compare student performance for District Factor Group (DFG), 56 Urban Districts, and Regional Curriculum Services Units. The report also contains district-by-district and school-by-school results grouped by DFG. The reading test was administered to 3,980 students in grade 11, 356 students in grade 12, and 31 returning students. The percent passing for each group was 81.5%, 68.5%, and 32.3%, respectively. The mathematics test was administered to 4,087 students in grade 11, 310 students in grade 12, and 24 returning students. The percent passing for each group was 85.1%, 79.0%, and 50.0%, respectively. 1986-87 Minimum Basic Skills Test Results - Grades 11 and 12

The New Jersey Minimum Basic Skills (MBS) test was administered on March 17 and 18, 1987 to students in grades 11 and 12 who had not yet passed one or both parts of the test. The MBS consists of two parts--reading and mathematics. The passing scores are reading - 75 and mathematics - 65.

Legislation that took effect in 1979 requires that students who entered ninth grade in 1981-82, or thereafter must pass the ninth grade statewide test as one of the requirements for a high school diploma. A provision in the law stipulated that students who did not pass all parts of the test would receive additional instruction and be retested in subsequent years.

During the four-year period 1981-82 to 1984-85, the Minimum Basic Skills (MBS) test, which assesses minimum skills in reading and mathematics, was administered to all ninth-grade students as their graduation test. Last year, students entering ninth grade took the High School Proficiency Test (HSPT), a more rigorous test of basic skills in reading, mathematics, and writing, as their graduation test. The MBS, however, continues to be used as the graduation test for students who entered ninth grade prior to September 1985 and have not yet passed this test. Most of the students tested this year were in eleventh or twelfth grade. In addition to students who previously did not pass one or both sections of the test, the test was administered to newly-enrolled eleventh and twelfth graders who had not yet taken the test. Finally, the test was administered to students no longer enrolled, but who were denied a diploma in 1985 or 1986 because they had not met the basic skills requirement. These students are referred to as "returning students."

The reading test was administered to 3,980 students in grade 11; 356 students in grade 12; and 31 returning students. The percent passing for each group is 81.5 percent for grade 11, 68.5 percent for grade 12, and 32.3 percent for returning students.

The mathematics test was administered to 4,087 students in grade 11; 310 students in grade 12; and 24 returning students. The percent passing for each group is 85.1 percent for grade 11, 79.0 percent for grade 12, and 50.0 percent for returning students.

This report includes a series of tables reporting test results statewide for grades 11 and 12 for reading and mathematics. Results for each subject are compared to student performance in previous years. In addition, tables are included that compare student performance for the following categories: District Factor Group (DFG), 56 Urban Districts, and Regional Curriculum Services Units (RCSUs). The report also contains district-by-district and school-by-school results grouped by DFG. The MBS scores in this report exclude students classified as handicapped, limited English-speaking, and students whose answer sheets were voided.

COMMUNITY TYPES AND DISTRICT FACTOR GROUPS

A. Community Types

1 -- Urban Center (UC): densely populated with extensive development.
2 -- Urban-Suburban (US): near an urban center but not as highly developed, with larger residential areas.
4 -- Suburban (S): predominantly single-family residential within a short distance of an urban area.
5 -- Suburban-Rural (SR): rapidly developing area, but still large tracts of open land available for development.
6 -- Rural (R): scattered small communities and isolated single-family dwellings.
7 -- Rural Center (RC): high-density core area with surrounding rural municipalities.
8 -- Rural Center Rural (RCR): small developed core area surrounded by rural areas.
9 -- Vocational (V): primary emphasis on vocational training under a separate educational jurisdiction.
0 -- Regional District (RD): an educational jurisdiction established to service several surrounding communities.

B. District Factor Groups

The District Factor Group (DFG) is an indicator of the socioeconomic status of citizens in each district and has been useful for the comparative reporting of test results from the statewide testing programs. The measure was first developed in 1974 using demographic variables from the 1970 United States Census. Since that time, however, the socioeconomic status of some districts may have changed considerably. Therefore, an updating of the DFG designations was needed.

The DFG's have been updated using seven socioeconomic variables from the 1980 United States Census. These are:

(1) Educational level

1 = elementary (0-8 years) through high school (1-3 years)
2 = high school (4 years)
3 = college (1-3 years)
4 = college (4 years)
5 = college (5+ years)

(2) Occupational status

1 = laborers
2 = service workers (except private and protective)
3 = farm workers

4 = operatives and kindred workers
5 = protective service workers
6 = sales workers
7 = clerical and kindred workers
8 = craftsmen, foremen, and kindred workers
9 = quasi-professionals
10 = managers, officials, and proprietors
11 = old and new professionals

(3) Density

number of persons per household

(4) Urbanization

percent of district considered urban

(5) Income

median family income

(6) Unemployment

percent of those in the work force who received some unemployment compensation in 1979

(7) Poverty

percent of residents below the poverty level in 1979

The variables were combined using a statistical technique called principal component analysis, which resulted in a single measure of socioeconomic status for each district. Districts were then ranked according to their value on this measure and divided into 10 equally-sized groups. Hence, DFGs range from A (lowest socioeconomic districts) to J (highest socioeconomic districts). In addition, special service districts are not included and all vocational districts are designated DFG "V".
